Hi, I'm Julien. I'm into building elegant and engaging web apps that help solve meaningful issues.

## Experience

2017 - Present

**Lead Front-End Developer**  
Healthy.io

- Currently technical leader for:
  - Two frontend developers building several web apps and websites to support the company's commercial, research, clinical, and regulatory activities.
  - Two backend developers building the company's operations automation platform.
- Facilitated the backend team's switch to Node.js by architecting their monorepo and teaching JavaScript.
- Maintaining [React Boilerplate](#), a large open-source project with 22k stars on GitHub.

2015 - 2017

**Full Stack Developer**  
monday.com

- Developed a few of monday.com's largest features, including its account admin, team management system, and the Gantt-like Timeline.
- Rebuilt from scratch monday.com's homepage and helped oversee the dev team's transition to React.
- Crafted with precision HTML emails that are read daily by hundreds of thousands of users.

2012 - 2015

**Full Stack Developer**  
Signals Analytics

- Design and development of BI-reporting tools and additional client-facing web apps.
- Technical adviser on new projects, defining methods for data collection, transformation, and analysis.

2011 - 2012

**Full Stack Developer**  
Waste To Watts

- Development of a platform to store and display data in real-time about the health of the power grid in India.

## Education

2007 - 2010

**Biomedical Engineering (BEng)**  
Imperial College London

## Volunteering

Summer 2009

**Biomedical Equipment Technician**  
Engineering World Health

2008 - 2010

**First Aid Responder**  
St John Ambulance
